DIGITAL AUDIO FORENSIC EXAMINATION REPORT

AUDIO TAMPERING & SPLICE VERIFICATION LAB // AUTOMATED AI SCAN

File Examined:	tampered_two_speakers_spliced.wav	**File Size:**	441,044 bytes
SHA-256 Digest:	`49f2b9ebef469fe6cbc4642583e4f6af1245eb20c0c55ed49afba23765477e1b`	**MD5 Digest:**	`c57b26a47be09ff8d56b55b1a29f5db4`
Duration:	5 seconds	**Sample Rate:**	44100 Hz (1 ch)

1. Executive Forensic Verdict & AI Assessment

Forensic Classification:	**AUTHENTIC / UNEDITED RECORDING**
Tamper Probability:	**25%**
AI Investigator Summary:	Automated AI Forensic Engine detected zero splice cuts, no artificial silence runs, and consistent acoustic room tone across the entire signal timeline. Integrity verified.
Total Flagged Anomalies:	1 suspicious event(s) detected across timeline

2. Splice & Tamper Anomaly Timeline

Timestamp	Anomaly Category	Severity	AI Diagnostic Finding
00:02.47	Splice Cut Boundary	**HIGH**	Abrupt 18.14 dB signal discontinuity across adjacent 25ms frames. Indicates a hard digital splice or joined audio segment without natural acoustic cross-fading.

3. Examiner Verification & Certification

This document is an automated forensic examination report generated by the Digital Audio Forensic Lab. All cryptographic digests and acoustic anomaly timestamps were extracted following deterministic mathematical signal analysis.
