DIGITAL AUDIO FORENSIC EXAMINATION REPORT

AUDIO TAMPERING & SPLICE VERIFICATION LAB // AUTOMATED AI SCAN

File Examined:	tampered_splice_cut.wav	**File Size:**	441,044 bytes
SHA-256 Digest:	`1ff32c1f89a21c384c45a3de1e0a2793c6db485c21484472f9b8356ab1519b3a`	**MD5 Digest:**	`c5de53b0aaf7021c2b85cd0f25326c24`
Duration:	5.0 seconds	**Sample Rate:**	44100 Hz (1 ch)

1. Executive Forensic Verdict & AI Assessment

Forensic Classification:	**TAMPERED / SPLICED AUDIO DETECTED**
Tamper Probability:	**99.9%**
AI Investigator Summary:	Automated AI Forensic Engine identified 4 anomaly indicator(s). The audio exhibits high-confidence evidence of intentional splicing, cutting, or digital alteration.
Total Flagged Anomalies:	4 suspicious event(s) detected across timeline

2. Splice & Tamper Anomaly Timeline

Timestamp	Anomaly Category	Severity	AI Diagnostic Finding
00:03.49	Splice Cut Boundary	**CRITICAL**	Abrupt 168.38 dB signal discontinuity across adjacent 25ms frames. Indicates a hard digital splice or joined audio segment without natural acoustic cross-fading.
00:03.97	Splice Cut Boundary	**CRITICAL**	Abrupt 158.19 dB signal discontinuity across adjacent 25ms frames. Indicates a hard digital splice or joined audio segment without natural acoustic cross-fading.
00:03.50	Artificial Speech Redaction	**CRITICAL**	Detected 0.5s of mathematical zero-amplitude signal. Natural microphones always capture ambient thermal noise; exact zeros indicate intentional digital deletion or censoring.
00:02.00	Acoustic Environment Shift	**MEDIUM**	Background ambient room tone shifted by 133.55 dB. Strong evidence that segments were recorded in different physical environments or spliced from separate sources.

3. Examiner Verification & Certification

This document is an automated forensic examination report generated by the Digital Audio Forensic Lab. All cryptographic digests and acoustic anomaly timestamps were extracted following deterministic mathematical signal analysis.

Forensic Examiner Signature: _____

Date of Verification: _____
